Art Rejections:

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 15-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wynblatt et al, U.S. pat. No. 6,546,421.

Per claims 15-16, Wynblatt discloses a method for processing a data stream description, comprising:

identifying a process unit as a section of the data stream description, wherein the process unit, e.g. descriptive page, contains information from the data stream description (see col 2, lines 61-67) wherein the descriptive information is required

for a transformation of the process unit by a processor, i.e., extracting and processing the descriptive information (see col 5, lines 21-65).

Wynblatt does not explicitly teach processing the process unit, i.e., descriptive information, without accessing a remaining section of the data stream description. Wynblatt however clearly teaches storing descriptive information in individual accessible pages such that a single relevant page would comprise sufficient relevant information (see col 3, lines 13-25 and col 4, lines 55-67).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to recognize that Wynblatt's system would have enabled using single relevant descriptive page that is required for transformation by the processor without accessing a remaining section of the data stream description (see col 3, lines 13-25 and col 4, lines 55-67).

Per claim 17, Wynblatt teaches adapting the data stream based on the transformed/processed of the data stream description (see col 7, lines 17-31).

Per claims 18-19, Wynblatt teaches using html or xml-based data stream description (see col 2, lines 64-67). It would have

been obvious to one skilled in the art that Wynblatt teachings are further applicable to other conventional data formats.

Per claims 20-29, Wynblatt teaches using a server to store/maintain data stream description pages (see col 3, lines 1-25). It is noted that Wynblatt's teachings encompass all claim limitations.

Claims 30-34 are similar in scope as that of claims 15-29.
